

Bind-It™

RADIOACTIVE
IODINE CLEANER

Bind-It™ radioactive iodine decontamination fluid is the safest and most effective way to reduce second hand exposure to others following thyroid treatment.

What is Bind-It™ radioactive Iodine decontamination fluid?

Over 20 years ago, we determined a need for an effective way to remove radioactive iodine contamination. General purpose radioactive decontaminants did a very poor job on iodine. So we developed Bind-It cleaner and hand soap.

Cleaning with bleach, bleach containing cleansers and bleach containing toilet bowl cleaners can cause the iodine to become volatile and go airborne. If it

becomes airborne, it can easily spread contamination beyond the washroom or bedroom.

Children and house pets have smaller thyroid glands than adults. Because of this, **second hand exposure to radioactive iodine is a real concern.** Bind-It products can help minimize that exposure when used properly along with the guidelines provided by your health care professional.

For more information about Bind-It products, visit our website at www.labtechinc.com or call us toll free at **800.542.1123** today.

Bind-It products work by trapping the I131 in solution. Then it can be wiped away or rinsed from surfaces that you may have contaminated as the I131 is eliminated from your body. Surfaces such as toilets, sinks, showers, bathroom floors, etc. should all be thoroughly cleaned to avoid spreading contamination.
