- ☑ Door Knobs
- ☑ Toilets
- ☑ Bathroom floors
- ☑ Bathtubs
- ☑ Showers
- ☑ Sinks

S4FE-D™ is not recommended for cleaning eating utensils and plates

Cleaning with S4FE-D™

With all cleanup, it is recommended that you use disposable paper towels.

S4FE-D™ works by attracting and binding contamination, so give it a little time to work. Then wipe the surface off with paper towels. The contamination will now be on the paper towels. Place those paper towels in a separate bag (from your regular trash) If you had I131 treatment, you must hold onto them for at least 3 months before throwing them away.

This wait time will allow the I131 to decay to background levels, making them safe to dispose of with your normal trash pickup.

Where to Clean - The Toilet

For the first 3-5 days your body will release much of the excess I131 or chemotherapy drugs through urine and feces. It is important to use your own bathroom.

Generously spray the outside of the toilet with S4FE-D™ CBRN Decon spray.

Wait 30 seconds

Using paper towels wipe down the toilet. Any contamination is now on the paper towels, place them in your decay bag or can.

Where to Clean - The Toilet

To clean the interior of the toilet ,
pour approximately 2 oz of S4FE-D™
CBRN Decon Concentrate into the
toilet bowl.

Scrub it with a toilet brush and let it
sit for at least 60 seconds. Thoroughly
scrub again with the toilet brush
being sure to get up under the rim as
well as the rest of the bowl. Flush
twice and set the brush aside*

* The toilet brush will likely be contaminated, For I131 treatment, store it with your decay bag for 3 months. Afterword, you can use it as normal, or dispose of it in the normal trash.

Where to Clean - The Sink

Thoroughly wet the surface of the sink with S4FE-D™ CRBN Decon spray.

Leave the liquid in place for at least 30 seconds before wiping with paper towels or washing away with water.

* Remember to store the paper towels in your decay bag for 3 months.

Where to Clean - The Shower

Thoroughly wet the shower with S4FE-D™ CBRN Decon Spray.

Leave the liquid in place for at least 30 seconds before wiping with paper towels or washing down the drain away with water.

* Remember to store the paper towels in your decay bag for 3 months.

Where to Clean - The Bathtub

Thoroughly wet the surface of the tub and surrounding area with S4FE-D™ CBRN Decon spray.

Leave the liquid in place for at least 30 seconds before wiping with paper towels or washing down the drain with water.

* Remember to store the paper towels in your decay bag for 3 months.

Where to Clean - Bathroom floor

Working in small 2' foot areas, thoroughly wet the area of the bathroom floor with S4FE-D™ CBRN Decon spray.

Leave the liquid in place for at least 30 seconds before wiping with paper towels.

* Remember to store the paper towels in your decay bag for 3 months.

Where to Clean - Door Knobs

Use a S4FE-D™ CBRN Decon Wipe and scrub the door knob for 45 seconds.

* Remember to store the used wipes in your decay bag for 3 months.

Where to Clean - Refrigerator handles

Use a S4FE-D™ CBRN Decon
Wipe and scrub the handle for
45 seconds.

* Remember to store the used wipes in your decay bag for 3 months.

Where to Clean - Remote Controls

Do not spray directly onto electronics, instead clean with SAFE-D™ CBRN Decon Wipes and carefully wipe the device avoiding getting any liquid into the speaker, buttons or other areas containing electronics

* Remember to store the used wipes in your decay bag for 3 months.

S4FE-D™ CBRN Decon spray - Tips

Many hospitals have reported to us that pre-spraying bathrooms dramatically reduced the decontamination time in patient isolation rooms.

To pre-treat, spray down all the surfaces you may come in contact with. Especially shower walls, sinks and toilets. **DO NOT REMOVE** the S4FE-D™, allow it to dry in place. Later when you do your final cleaning of your isolation bathroom, follow the cleaning instructions outlined earlier, the contamination will be much easier to remove.

Take care when spraying floor or surfaces that you will walk on, as they may become slippery. Do not pre-spray on any surface that could create a hazard.

S4FE-D™ CBRN Decon Concentrate - Tips

S4FE-D CBRN Decon Concentrate can be used to clean toilets, clothing, bed sheets and even make ready to use spray.

In order to clean clothes with S4FE-D™, fill a tub, or bucket up with water (distilled, filtered or softened water is best), use 6 oz of S4FE-D™ CBRN Decon Concentrate per gallon of water. Soak your clothing items for at least an hour*.

After that, wring out your clothes and wash them with normal soap in a washing machine.

*While S4FE-D™ has been tested on hundreds of material and fabrics, we cannot guarantee color fastness of your items.

S4FE-D™ CBRN Decon Concentrate - Tips

Bed Sheets may be the single most contained item in your home isolation room. You can clean bed sheets with the before mentioned method, but repeated washing will be necessary.

We recommend that you purchase inexpensive sheets that you can use during your isolation period. Once your isolation is complete, you can store the contaminated sheets away from people, for 90 days to allow the I131 to decay to background levels. Then you can wash them as regular laundry.

*While S4FE-D™ has been tested on hundreds of material and fabrics, we cannot guarantee color fastness of your items.

S4FE-D™ CBRN Decon Concentrate - Tips

Refilling the S4FE-D™ CBRN Decon Spray bottle

To make more S4FE-D™ CBRN Decon spray out of S4FE-D™ CBRN concentrate, squeeze approximately 3 oz of S4FE-D™ concentrate into your empty S4FE-D™ CBRN Decon spray bottle.

Pour DISTILLED water into the RTU bottle, filling it to within 1 inch of the top. Replace the shipping cap, and shake the bottle to thoroughly mix the solution. Let it rest to allow the foam to settle before use.

S4FE-D™ CBRN Decon Soap

S4FE-D™ CBRN Decon Soap is used to wash your hands and as body wash in the shower.

Research has shown that washing your hands often with S4FE-D™ CBRN Decon Soap greatly reduces the overall contamination in your isolation room.

The second bottle of S4FE-D™ Hand & Body Soap can be used by family members if they come in contact with the patient or the isolation room.

Additional bottles S4FE-D™ CBRN Decon Soap may be purchased separately at www.I131Safety.com

S4FE-D™ Home Isolation Kit

At Laboratory Technologies, Inc. we strongly believe that patient care does not end at the exit sign.

The S4FE-D™ Home Isolation Kit was created to fill a need for family and home safety.

Hospitals use S4FE-D™ to keep their technicians safe.

Your families deserve the same protection.
